

The Best Kept Secret in the Fan Industry is About to Get Out

Two Different Configurations, Both Certified

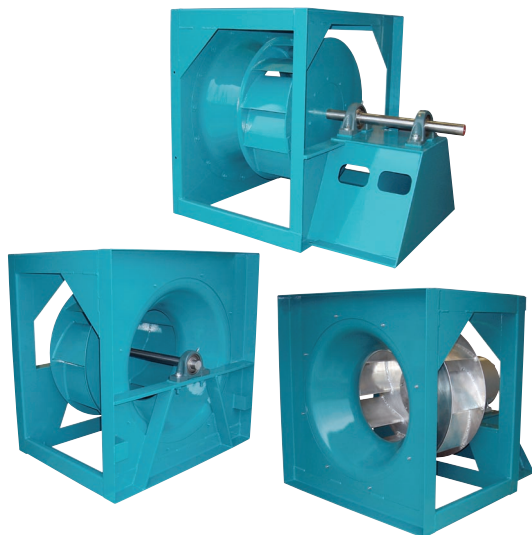

Twin City Fan & Blower's inlet and outlet sound and air performance ratings for their entire plenum fan line is AMCA certified in two different configurations: one *with* the bearing in the inlet and one *without* the bearing in the inlet.

Faith in the Fan Ratings

As a customer who buys plenum fans, you need to be able to count on the fan rating. In fact, you often make guarantees for your equipment including the fan. Twin City Fan & Blower is the first fan manufacturer to AMCA certify their plenum fans with and without the bearing in the inlet.

Trust the company you have trusted for years....and ask the others how that bearing in the way affects their fan performance. For more information, refer to Engineering Data Letter 3700: Improvements in Fan Performance Rating Methods and Bulletin 470 found on our web site at www.tcf.com.
