

INDUSTRIAL PROCESS AND
COMMERCIAL VENTILATION SYSTEMS

BACKWARD CURVED HIGH PRESSURE FANS

MODEL BCS

Overview

BCS

Arrangement 8

The BCS fan from Twin City Fan & Blower is a high efficiency backward curved industrial fan designed for handling relatively clean air in high pressure applications. Typical industries include general HVAC (exhaust, filtration, return and supply, air of commercial buildings), automotive, fertilizer, metal and mineral processing, pulp and paper, petrochemical, pharmaceutical, power, water and wastewater treatment.

Because the BCS features a wider impeller and housing, producing a high volume of air at a lower velocity, the need for an expansion easé is eliminated.

BCS fans are available with a variety of construction options and accessories, offering the versatility and flexibility required in today's industrial applications.

Typical Applications Include

Air Pollution Control (including filtration and dust collection), Chemical/Corrosive Process, Combustion Air Drying Process Exhaust, Forced Draft on Fluid Bed Boilers, General HVAC, General Manufacturing, High Temperature Applications, Induced Draft After Baghouse and other Process, Moisture Blow-Off, Product Cooling, Water Treatment

Impeller Types

Backward Curved

Configurations

Available in direct and belt driven Arrangements 1, 3SI, 4, 7SI, 8, 9, 9H and 9F

Optional Construction

High Temperature, Nominally Leaktight Construction, Spark Resistant, Split Housings

Certification

AMCA Fan Energy Index

Arrangement 9

Twin City Fan & Blower certifies that the Model BCS fans shown herein are licensed to bear the AMCA Seal for sound and air performance. The ratings shown are based on tests and procedures performed in accordance with AMCA Publications 311 & 211 and comply with the requirements of the AMCA Certified Ratings Program.

For complete product performance, drawings and available accessories, download our Fan Selector program at tcf.com.

Overview

BCS

Sizes and Performance

16.5" to 89" impeller diameters
Airflow to 280,000 CFM
Static pressure to 40" w.g.
Airstream temperatures to 800°F

Construction

- Design 14 — for tip speeds up to 14,000 FPM
- Design 17 — for tip speeds up to 17,000 FPM
- Design 22 — for tip speeds up to 22,000 FPM
- Design 26 — for tip speeds up to 26,000 FPM

RTO System with Model BCS

IMPELLER DESIGN

The BCS impeller features heavy-gauge steel construction and a non-overloading impeller design, suitable for applications requiring large volumes of air at moderate to high pressures.

The high efficiency impeller features backward curved blades of single thickness, continuously-welded to the rim and back plate.

A conical spun shroud (rim) makes BCS fans less susceptible to the performance losses associated with poor inlet conditions.

All BCS impellers are statically and dynamically balanced to grade G6.3 per ANSI S2.19 for smooth operation prior to assembly of the fan, followed by a final balance of the entire rotating assembly.

BCS Impeller &
Blade Profile

Housings

Heavy-gauge, reinforced, continuously-welded housings provide strength and durability for extended service life – a necessity in all commercial and industrial installations.

Outlet flanges for duct-connection as well as rigidity are standard. Inlet collars for slip-joint connection and lifting lugs are also standard. All housings are reinforced with rigid bracing to increase structural integrity. The support angles are intermittently welded and caulked between welds to prevent bleed-through corrosion. Precisely positioned cutoff plates and aerodynamically spun inlet cones provide high efficiency and smooth airflow through the fan.

Shaft

Shafts are AISI Grade 1045 hot-rolled steel accurately turned, ground, polished and ring gauged for accuracy. Shafts are generously sized for first critical speed of at least 1.43 times the maximum speed for the class.

Bearings

Bearings are heavy-duty, grease-lubricated, anti-friction ball or roller, self-aligning, pillow block type and are selected for minimum average bearing life (ABMA L-50) in excess of 200,000 hours at the maximum fan RPM.

INSTALLATION PHOTOS

Process Fans for Wood Pelletizing

Dust Collection System

Exhaust Fans for Nuclear Plant

Split Housing

A flanged horizontal split housing is available on the fan's centerline. A pie-shaped or 3-way split are also available for impeller removal without disturbing the ductwork.

High Temperature Construction

Standard fan design options are available to handle airstream temperatures to 800°F. Consult your Twin City Fan & Blower representative for applications over 800°F or when aluminum (spark resistant) or stainless steel construction is required. The fan bearings should be kept outside of the hot airstream and below 130°F ambient. High temperature operating limits, available arrangements and necessary modifications are shown in Table 1.

Horizontal Split Housings

(also available with Pie-Shaped & Three-Way Split Housings)

Table 1. High Temperature Construction Requirements

TEMPERATURE (°F)	TYPE OF BEARING	LUBRICATION	OTHER REQUIREMENTS	AVAILABLE ARRANGEMENTS
-22° to 300°	Ball or Roller	Grease	Standard Fan	1, 8, 9, 9F
301° to 500°	Ball or Roller	High Temp. Grease	Shaft Cooler, Shaft Seal Expansion & Non-Expansion Bearings	1, 8, 9, 9F
501° to 600°	Ball or Roller	High Temp. Grease	Same as 301° to 500° With Additional of High Temp Aluminum Paint	1, 8, 9, 9F
601° to 800°	Ball or Roller	High Temp. Grease	Same as 501° to 600° With Modification of Bearing Pedestal	1, 8, 9F

High Temperature Derating Factors

When elevated temperatures are encountered, maximum RPM allowable must be derated according to the table below. For stainless steel derates, contact the factory.

AIRSTREAM TEMPERATURE (°F)	IMPELLER MATERIAL STANDARD STEEL	
	DES. 17	DES. 14, 22, 26
70	1.00	1.00
200	0.99	0.97
250	0.98	0.96
300	0.98	0.95
350	0.97	0.94
400	0.96	0.93
450	0.94	0.92
500	0.93	0.92
550	0.92	0.91
600	0.90	0.90
650	0.89	0.89
700	0.88	0.87
750	0.87	0.86
800	0.84	0.84
Above 800	Consult Factory	

Spark Resistant Construction

Fan applications may involve the handling of potentially explosive or flammable particles, fumes or vapors. Such applications require careful consideration by the system designer to insure the safe handling of such gases. Twin City Fan & Blower offers the following classifications of spark resistant construction per AMCA Standard 99-0401-86. It is the specifier's or the user's responsibility to specify the type of spark resistant construction with full recognition of the potential hazards and the degree of protection required.

- Type A: All parts of the fan in contact with the air or gas being handled shall be made of nonferrous material — usually aluminum and limited to 250°F.
- Type B: The fan shall have a nonferrous impeller or impeller and nonferrous ring about the opening through which the shaft passes — usually aluminum impeller and rub ring and limited to 250°F.
- Type C: The fan shall be so constructed that a shift of the impeller or impeller or shaft will not permit two ferrous parts of the fan to rub or strike. This construction is limited to 500°F. Construction to 800°F is available using a steel inlet cone with copper/bronze lining.

Arrangement 1

Arrangement 1 is usually belt driven. The impeller is overhung on the shaft, i.e., mounted at the end of the shaft. The motor can be mounted in any of the four AMCA standard motor positions shown on page 10. The two fan bearings are mounted on the bearing pedestal, out of the airstream, which makes them ideal for high temperature or contaminated air applications. Belt driven configurations offer performance flexibility.

Arrangement 3SI

Arrangement 3SI is usually direct drive. Like the Arrangement 3, the impeller is mounted between the bearings. The Arrangement 3SI utilizes an attached inlet box to locate the bearing outside of the airstream on independent bearing pedestals, which allows for elevated operating temperatures and relatively clean air. The Arrangement 3SI includes a pie split housing for easy impeller removal. The motor is located by the customer off the fan assembly and direct coupled to the shaft opposite of the inlet box side.

Arrangement 4

Arrangement 4 is a direct drive fan. The impeller is mounted directly to the motor shaft with the motor mounted to a pedestal. Arrangement 4 offers low maintenance since there are no fan bearings, fan shaft or drive parts to maintain. Arrangement 4 fans are typically limited up to size 365.

Arrangement 7SI

Arrangement 7SI is direct drive. Like the Arrangement 3SI, the impeller is mounted between the bearings. The Arrangement 7SI includes an integrated inlet box to locate the bearing outside of the airstream. The pedestal is designed to accommodate the motor, flexible coupling and one bearing. A pie split housing is provided for easy impeller removal. The fan assembly is then mounted on a unitary base as standard. An inertia base is an available option.

Arrangement 8

Arrangement 8 is a modified version of Arrangement 1 used for direct drive. The Arrangement 1 bearing pedestal is extended to accommodate the motor. A flexible coupling connects the fan and motor shaft.

Arrangement 9

Arrangement 9 is available as belt driven only. A motor slide base is mounted on the side of the bearing pedestal. This arrangement permits the unit to ship as a complete assembly with the motor and drive mounted. Typically, the motor is mounted on the left side of the pedestal for CW rotation fans and on the right side for CCW rotation fans.

Arrangement 9F

Arrangement 9F is available when an Arrangement 9 requires a motor that is too large to mount on the bearing pedestal. The fan frame is extended to accommodate the motor, for horizontal mounting, similar to an Arrangement 1 fan. Arrangement 9F is not suitable for mounting vibration isolators directly under the fan.

Arrangement 9H

Arrangement 9H is available for motor mounting on the side of the bearing pedestal when horizontal motor adjustment is preferred. The pedestal is extended on one side to accommodate the motor for horizontal mounting. Typically, the motor is mounted on the left side of the pedestal for CW rotation fans and on the right side for CCW rotation fans.

1 External Inlet Vane For reduced flow situations with relatively clean air, inlet vane type dampers are available to maintain fan efficiency. The inlet vanes are external type attached to the inlet of the fan. Standard construction inlet vanes are suitable in applications up to 300°F. High temperature inlet vanes are also available for temperatures up to 600°F.

2 Inertia Base See description on page 11.

3 Flanged Inlet/Outlet Punched inlet flanges are available for duct mounting. Punched outlet flanges are welded to the fan outlet.

4 Split Housing, Pie-Shaped All sizes are designed to permit impeller removal through the fan inlet. Sizes 270 and larger are available with a horizontal, pie-shaped or 3-way split housing, which allows removal of the impeller and shaft without disconnecting ductwork.

5 Inlet/Outlet Companion Flanges & Flex Connectors (Round & Rectangular) Companion flanges are commonly connected to a user's duct for easy installation of flexible connections between the fan and duct. Companion flanges and flex connectors are punched to match the fan's inlet or outlet hole patterns.

6 Coupling & Shaft Guards (Exposed Bearings) A metal guard spanning the shaft between the bearings, allowing open access to the bearings for lubrication and vibration or temperature monitoring. A metal guard covering shaft and bearing is available. Coupling guard is designed to cover the rotating shaft and drive components.

7 Shaft Seals A variety of shaft seals are available to prevent contaminants in the airstream from passing through the shaft hole in the fan housing. The shaft seal is provided as standard on all fans with applications over 300°F and fans with split housings. Although shaft seals minimize air leakage, they are not a gas-tight design.

1 Inlet/Outlet Safety Screens Available for mounting in the fan inlet or outlet in non-ducted applications.

2 Unitary Base See description on page 11.

3 Belt Guard Belt guard protects personnel from the moving drive parts. OSHA and quick access guards are available.

4 Shaft & Bearing Guard Sheet metal guard cover shaft and bearings. An exposed bearing shaft guard spanning the shaft between the bearings is available to provide open access to bearings for lubrication and vibration or temperature monitoring.

5 Outlet Dampers Double surface airfoil blades are available in either parallel or opposed blade design.

6 Lube Lines Allow for easy lubrication of bearings on belt driven units without disassembly by extending lubrication lines from fan bearings to exterior of pedestal.

7 Quick Access Door For quick impeller inspection and maintenance. Access doors are specified where examination and cleaning of the fan interior is required.

Other Accessories Include:

- Piezometer Ring
- Drain
- Inlet Boxes
- Insulation Pins
- Bearing RTD
- Vibration Sensors
- Isolation Base
- Raised/Bolted Access Door
- Special Width & Diameter Impellers

CLOCKWISE (CW) - ROTATION & DISCHARGE (ROTATION VIEW FROM DRIVE SIDE)

COUNTER CLOCKWISE (CCW) - ROTATION & DISCHARGE (ROTATION VIEW FROM DRIVE SIDE)

MOTOR POSITIONS

Arrangement 1

Arrangement 9

Arrangement 9F

Unitary Bases

The structural steel base provides common support to fan, motor and drive including guards. This style of base is designed for use without isolators and requires adequate foundation integrity for proper operation.

Isolation Bases

Isolation bases provide a common support to fan, motor and drive, including guards. Constructed with heavy-duty structural channels and includes spring isolations. Not available on Arrangement 8. Flexible connectors at inlet and outlet are required.

Inertia Bases

Inertia bases provide a common support to fan, motor and drive including guards and utilize heavy-duty structural channel with spring isolators. Inertia bases incorporate reinforcing rods and require customer supplied concrete. Inertia bases are typically used on longer, direct drive fans to mitigate assembly deflection, maintaining proper alignment between the motor, coupling, shaft and bearings. Flexible connectors at inlet and outlet are required.

INLET BOXES

**INTEGRAL INLET BOX
(ATTACHED)**

**DETACHED INLET BOX
(BOLT ON)**

**DETACHED INLET BOX
(FREE STANDING)**

Inlet Box Positions for Centrifugal Fans

INLET BOX POSITIONS AND DESCRIPTIONS	
45	Angular Down Intake
90	Horizontal Right Intake
135	Angular Up Intake
180	Bottom Up Intake
225	Angular Up Intake
270	Horizontal Left Intake
315	Angular Down Intake
360	Top Down Intake

Reference line is the Top Vertical Axis through center of fan shaft.

Position of inlet box and air entry to inlet box is determined from drive side of fan.

Position of inlet box is designated in degrees clockwise from Top Vertical Axis as shown.

Positions 135° to 225° in some cases interfere seriously with floor structure.

*Maximum operating speed is limited to 4000 RPM. RPM listed above 4000 is for derating due to elevated temperatures.

Underlined numbers indicate maximum static efficiency.

Performance is for BCS with outlet duct and with or without inlet duct.

BHP is a fan shaft brake horsepower and does not include belt drive losses.

Underlined numbers indicate maximum static efficiency.
 Performance is for BCS with outlet duct and with or without inlet duct.
 BHP is a fan shaft brake horsepower and does not include belt drive losses.

Underlined numbers indicate maximum static efficiency.
Performance is for BCS with outlet duct and with or without inlet duct.
BHP is a fan shaft brake horsepower and does not include belt drive losses.

Underlined numbers indicate maximum static efficiency.
 Performance is for BCS with outlet duct and with or without inlet duct.
 BHP is a fan shaft brake horsepower and does not include belt drive losses.

Underlined numbers indicate maximum static efficiency.
Performance is for BCS with outlet duct and with or without inlet duct.
BHP is a fan shaft brake horsepower and does not include belt drive losses.

AC17014E

NOTES:

- Punched outlet flanges are included on all discharges per AC14986, or for 'DBD' AC14867.
- Optional punched inlet per AS363.
- 'CW' rotation is shown. 'CCW' rotation is similar but opposite.
- For fans with inlet box at 90° or 270° use 'BAU' discharge dimension 'DF' for centerline height.
- 'FR' equals maximum motor frame. Standard Arr. 9 motor location is on the left for "CW" rotation units and on the right for "CCW" rotation units (unless otherwise specified).

NOTES:

- Punched outlet flanges are included on all discharges per AC14987, or for 'DBD' AC14868.
- Optional punched inlet per AS363.
- 'CW' rotation is shown. 'CCW' rotation is similar but opposite.
- For fans with inlet box at 90° or 270° use 'BAU' discharge dimension 'DF' for centerline height.
- 'FR' equals maximum motor frame. Standard Arr. 9 motor location is on the left for 'CW' rotation units and on the right for 'CCW' rotation units (unless otherwise specified).

BC14952F - ARR. 1
BC14955E - ARR. 9

BC14953E – ARR. 1
BC14956E – ARR. 9

NOTES:

1. Punched outlet flanges are included on all discharges per AC14988, or for 'DBD' AC14869.
2. Optional punched inlet per AS363.
3. 'CW' rotation is shown. 'CCW' rotation is similar but opposite.
4. For fans with inlet box at 90° or 270° use 'BAU' discharge dimension 'DF' for centerline height.
5. 'FR' equals maximum motor frame. Standard Arr. 9 motor location is on the left for "CW" rotation units and on the right for "CCW" rotation units (unless otherwise specified).

AC17015D

NOTES:

1. Punched outlet flanges are included on all discharges per AC14986, or for 'DBD' AC17016.
2. Optional punched inlet per AS363.
3. 'FR' equals maximum motor frame. Standard Arr. 9F motor location is on the left for "CW" rotation units and on the right for "CCW" rotation units (unless otherwise specified).

Arrangement 9F, Class 17

BC14958E

NOTES:

1. Punched outlet flanges are included on all discharges per AC14988, or for 'DBD' AC14925.
2. Optional punched inlet per AS363.
3. 'FR' equals maximum motor frame. Standard Arr. 9F motor location is on the left for "CW" rotation units and on the right for "CCW" rotation units (unless otherwise specified).

NOTES:

1. Dimensions are not to be used for construction.
2. Dimensions are in inches unless otherwise noted.
3. For Integral Inlet Box, consult factory for "D" dimensions.

Model

BC-SW

Sizes

12.25" to 98.25" impeller diameters

Performance

Airflow to 277,500 CFM

Static pressure to 20" w.g.

Arrangements

1, 3, 3F, 3SI, 4, 7SI, 8, 9, 9F and 10

See Catalog 300 for more information

Model

BAE-SW

Sizes

12.25" to 98.25" impeller diameters

Performance

Airflow to 277,500 CFM

Static pressure to 20" w.g.

Arrangements

1, 3, 3F, 3SI, 4, 7SI, 8, 9, 9F and 10

See Catalog 370 for more information

Model

BCFS

Sizes

16.5" to 60" impeller diameters

Performance

Airflow to 151,000 CFM

Static pressure to 34" w.g.

Arrangements

1, 8, 9, 9F and 10

See Catalog 410 for more information

TYPICAL SPECIFICATIONS

Model BCS

Fans shall be Model BCS, Backward Curved High Pressure Blowers, as manufactured by Twin City Fan & Blower, Minneapolis, Minnesota.

PERFORMANCE — Performance ratings shall conform to AMCA Standard 208 (fan energy index), 211 (air performance) and 311 (sound performance). Fans shall be tested in accordance with ANSI/AMCA Standard 210 (air performance) and 300 (sound performance) in an AMCA accredited laboratory. Fans shall be licensed to bear the AMCA certified ratings seal for sound, air and Fan Energy Index (FEI).

Fans shall have a sharply rising pressure characteristic extending through the operating range and continuing to rise beyond the peak efficiency to ensure quiet and stable operation. Fans shall have a non-overloading design with self-limiting horsepower characteristics and shall reach a peak in the normal selection area. All fans shall be capable of operating over the minimum pressure class limits as specified in AMCA Standard 99.

CONSTRUCTION — Fan housings and bearing pedestals shall be of heavy-gauge, continuously-welded construction. Housings with partially welded construction are not acceptable. Housings shall be suitably braced to prevent vibration or pulsation. Discharge flanges shall be provided for rigidity and duct connection. Discharge flanges are punched as standard. All units are furnished with lifting lugs.

IMPELLER — BCS backward curved impellers shall be single thickness, designed for maximum efficiency and quiet operation, and shall be continuously-welded to the rim and back plate. Partial welding is not acceptable on backward curved blades. All impellers shall be statically and dynamically balanced.

SHAFT — Shafts shall be AISI 1045 hot rolled steel, accurately turned, ground, polished and ring gauged for accuracy. Shafts shall be sized for the first critical speed of at least 1.43 times the maximum speed.

BEARINGS — Bearings shall be heavy-duty, grease lubricated, anti-friction ball or roller, self-aligning, pillow block type and selected for a minimum average bearing life (ABMA L-50) in excess of 200,000 hours at the maximum fan RPM.

DRIVE — Motor sheaves shall be cast iron, variable pitch on applications 20 HP and smaller, and fixed pitch on 25 HP and larger. Drives and belts shall be located external to the fan casing and rated for 150% of the required motor HP.

FINISH AND COATING — The entire fan assembly, excluding the shaft, shall be thoroughly degreased and deburred before application of a rust-preventative primer. After the fan is completely assembled, a finish coat of paint shall be applied to the entire assembly. The fan shaft shall be coated with a petroleum-based rust protectant. Aluminum components shall be unpainted.

ACCESSORIES — When specified, accessories such as access doors, drains, inlet and outlet flanges, belt guards, shaft and bearing guards, outlet screens, outlet dampers, inlet vanes, spark resistant construction, split housings, high temperature construction, shaft seals, inlet boxes and shaft coolers shall be provided by Twin City Fan & Blower to maintain one-source responsibility.

FACTORY RUN TEST — All fans prior to shipment shall be completely assembled and test run as a unit at the specified operating speed or maximum RPM allowed for the particular construction type. Each impeller shall be statically and dynamically balanced in accordance with ANSI/AMCA 204-96 "Balance Quality and Vibration Levels for Fans" to Fan Application Category BV-3, Balance Quality Grade G6.3. Balance readings shall be taken by electronic type equipment in the axial, vertical, and horizontal directions on each of the bearings. Records shall be maintained and a written copy shall be available upon request.

GUARANTEE — The manufacturer shall guarantee the workmanship and materials for at least one (1) year from startup or eighteen (18) months from shipment, whichever occurs first.
